2 Change 1 – Power Switch T22 changed

2.1 Key Characteristics of the Change

The P-MOSFET power switch was changed for a better power on behavior.

2.2 Description of Change to the Customer

The MOSFET T22 switches the 3.3V main voltage for power sequencing on and off. To improve the power on behavior the type was changed to IRF7210PBF. Also the RC-circuit to control the MOSFET was adapted.

2.3 Customer Impact of Change and Recommended Action

No further actions necessary.
